

## ABSTRACT OF THE DISCLOSURE

1  
2       A circular sawing machine includes a base, a saw seat movable  
3   relative to the base, and a link mechanism pivotally mounted between the base  
4   and the saw seat, so that the saw seat is linearly movable relative to the base.  
5   Thus, the link mechanism can absorb vibration or shock during operation of  
6   the circular saw blade so as to provide a shock-absorbing effect the circular  
7   saw blade, so that the circular saw blade can be operated smoothly and stably.
